This is the answer for this one:

There is no indication that there has been a formal jurisdictional determination for Cement Creek, which would have been conducted at the request of a landowner. However, Cement Creek is a perennial stream and it is likely to be covered by the Clean Water Act. That would not change under the Clean Water Rule.

Agree with Ken because "relatively permanent" tribs are jurisdictional under the plurality decision – but its probably worth making clear that the agencies have not conducted a formal jurisdictional determination - which are done at the request of the landowner.

Then I think we can say that Cement Creek is a perennial stream and is currently considered to be covered by the Clean Water Act. Its status will not change under the new rule.

Do we know whether it is listed as impaired?

From Rich - Cement Creek is considered a perennial stream and covered under the CWA.

We don't have detailed information about Cement Creek and there is no indication that a formal jurisdictional determination has been done for this waterbody. Having looked at photographs of Cement Creek, however, it seems very likely that the Creek would be jurisdictional under existing regulations, and that would not change under the new rule.

OW, OGC and R8 - wondering how/if we should answer this question on CWA coverage of Cement Creek and if Clean Water Rule changed its status.

Hi Travis and Robert--

I am in the JIC for the Gold King Mine spill, trying to close out some press inquiries. Can you help with this one?

Prior to the Clean Water Rule this summer, would Cement Creek have been protected under the Clean Water Act? Is it included now?

Thanks for your help.
